Fujitsu FD0-210

Fujitsu fd0-210 Implementing HP XP1024/128 Array Solution Fundamentals

Practice Test

Version 1.0

QUESTION NO: 1

Fill in the blanks in the following statement: ? The application framework functions provided with Apworks for developing _____ Web applications means that easy-to-maintain _____ applications can be developed efficiently. ?

A. Open source / Java
B. Open source / C++, CORBA and Java
C. Modern / COBOL
D. J2EE-compliant / Java

Answer: D

QUESTION NO: 2

Which of the following functions relates to the ? Integration ? product category?

A. Provides support for maintaining stable operations
B. Brings together business information and processes into a cohesive view of the business
C. Provides a robust infrastructure for supporting Web applications
D. A highly productive environment for creating Web applications

Answer: B

QUESTION NO: 3

From what area was the technology used in the OLTP functions of Interstage App Server V6 derived.

A. Mainframe software
B. Load balancing servers
C. Online server applications
D. Open source technologies

Answer: A

QUESTION NO: 4

Which of the following main functions is NOT provided by Interstage Contentbiz?

A. Distribution
B. Aggregation

C. Management

D. Authentication

Answer: D

QUESTION NO: 5

What modeling language is supported by the sophisticated modeling tool that is recommended for use with the Interstage Development Suite?

A. Java Modeling Language

B. VRML

C. Unified Modeling Language

D. AMPL Modeling Language

Answer: C

QUESTION NO: 6

Which of the following is NOT a feature of Interstage i-Flow?

A. Modular, Standards-based Architecture

B. Full featured application development environment

C. Broad Administration and Notification Capabilities

D. Browser-based Process Modeling Environment

Answer: B

QUESTION NO: 7

The application framework functions provided with Apworks are based on _____ application design.

A. J2EE

B. XML

C. UML

D. .NET

Answer: A

QUESTION NO: 8

Complete the following sentance. Eclipse is ?

A. An open source development environment project.
B. None of the above
C. A Java based testing component that allows stand alone Application Server testing,
D. A sophisticated UML tool that supersedes the Apworks modeling components.
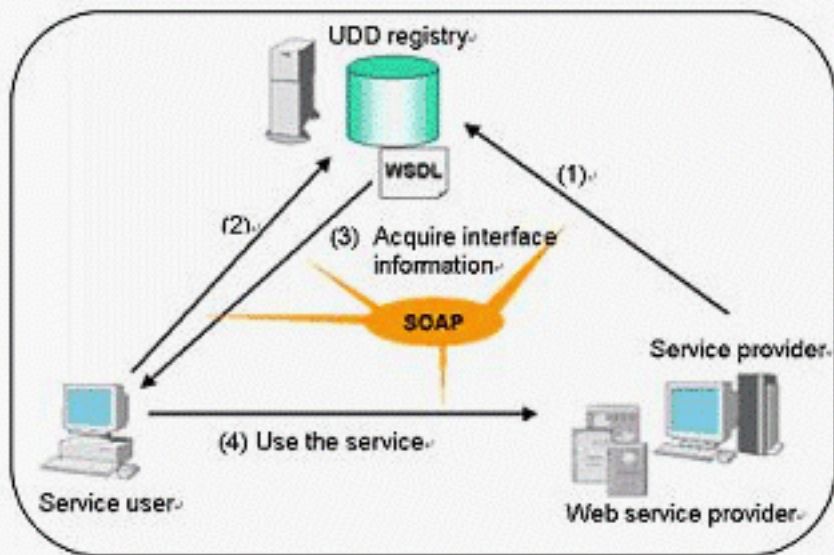

Answer: A

QUESTION NO: 9

Which of the following statements accurately describes the use of Interstage Navigator?

A. Interstage Navigator can be used to provide an organizational view of the data without large scale rebuilding of warehouses.
B. Interstage Navigator achieves total optimization and improves business efficiency by providing support at all levels, from data collection right through to information utilization.
C. Interstage Navigator provides an infrastructure that allows information to be used on an enterprise-wide basis, which promotes the efficient operation of the organization.
D. All of the above.

Answer: D

QUESTION NO: 10

Select the correct combination of terms to fill in the blanks (1) and (2) in the following diagram relating to the SOAP protocol.

A. (1) Deploy services (2) Register/publish services

B. (1) Register/publish services (2) Deploy services

C. (1) Search for services (2) Register/publish services

D. (1) Register/publish services (2) Search for services

Answer: D

QUESTION NO: 11

Which of the following Interstage products is NOT contained in the ? Integration ? product category

A. Portalworks

B. CollaborationRing

C. Navigator

D. Application Server

Answer: D

QUESTION NO: 12

Which of the following types of applications can the Interstage App Server Management console NOT control?

A. J2EE

B. C/C++

C. Web Services

D. UML

Answer: D

QUESTION NO: 13

What modeling language is supported by the sophisticated modeling tool that is recommended for use with the Interstage Development Suite?

A. AMPL Modeling Language

B. Unified Modeling Language

C. VRML

D. Java Modeling Language

Answer: B

QUESTION NO: 14

Which of the following answers does NOT describe a function provided by Interstage Security Director?

A. Interstage Security Director can perform SSL user authentication to allow or disallow access to individual URLs.

B. Interstage Security Director can protect services from denial of service (DoS) attacks by concealing Intranet server information (host names, IP addresses, etc.) from the Internet.

C. Interstage Security Director uses telephone numbers to perform authentication for accesses from mobile telephones.

D. Authentication results are inherited by the application server and so users need to undergo authentication only once to access applications.

Answer: C

QUESTION NO: 15

Which of the following functions are parts of Interstage Application Server Plus Developer?

A. A conversion function to allow programs written in Java to be exported to other languages supported by the Interstage Application Server

B. A portal function supplied to allow integration of application screens

C. All of the above functions

D. A rapid deployment function to allow fast deployment of programs written in COBOL

Answer: B

QUESTION NO: 16

Which development languages is NOT available for creating applications to run on Interstage App Server V6

A. Java
B. C/C++
C. .NET
D. COBOL

Answer: C

QUESTION NO: 17

Which of the following statements is NOT true for Interstage App Server V6?

A. Browser based configuration console
B. Time for installation and operation similar to previous versions
C. Fast and simple product installation and setup
D. Application processing time and resource consumption can be monitored during operation

Answer: B

QUESTION NO: 18

Which of the following Interstage products is part of the ? Development Suite ? category

A. Apworks
B. XWand
C. Navigator
D. Application Server

Answer: A

QUESTION NO: 19

Interstage XWand provides what type of programmatic interface?

A. C/C++
B. COBOL
C. .NET
D. Java, Java Class Library

Answer: D

QUESTION NO: 20

Interstage XWand provides what type of programmatic interface?

A. COBOL
B. Java, Java Class Library
C. .NET
D. C/C++

Answer: B

QUESTION NO: 21

Which of the following answers does NOT describe a function provided by Interstage Security Director?

A. Authentication results are inherited by the application server and so users need to undergo authentication only once to access applications.
B. Interstage Security Director can perform SSL user authentication to allow or disallow access to individual URLs.
C. Interstage Security Director uses telephone numbers to perform authentication for accesses from mobile telephones.
D. Interstage Security Director can protect services from denial of service (DoS) attacks by concealing Intranet server information (host names, IP addresses, etc.) from the Internet.

Answer: C

QUESTION NO: 22

Apdesigner is a workbench based on which open source development platform?

A. Interstage Application Server Plus Developer

B. Borland J Builder

C. Linux

D. Eclipse

Answer: D

QUESTION NO: 23

Which of the following protocols does CORBA provide to link client/server applications running over different platforms?

A. ebXML

B. SWAP

C. IIOP

D. IDL

Answer: C

QUESTION NO: 24

Which of the following statements best describes the focus of the Interstage Integration product category?

A. All of the above

B. The objective of integration is to optimization the entire enterprise and to improve efficiency in the business process by combining services

C. Process Integration creates new business processes by allowing business applications to cooperate seamlessly.

D. Integration comprises the plans, methods, and tools aimed at modernizing, consolidating and coordinating applications and processes in an enterprise.

Answer: A

QUESTION NO: 25

Which of the following characteristics is NOT associated with the multi container function of Interstage App Server V6?

A. Each servlet container can be operated on separate Java VMs

B. A failure in one servlet container will mean the other container will need to be restarted

C. The same Web application can be distributed across multiple servlets

D. Each servlet container can be started and stopped independently

Answer: B

QUESTION NO: 26

Which of the following execution environments is Interstage App Server V6 NOT supported on

A. Solaris
B. AIX
C. Linux
D. Windows 2000 Server editions

Answer: B

QUESTION NO: 27

Which of the following interfaces is NOT provided by the Aggregation function of Interstage Contentbiz?

A. RDB
B. Lotus Notes
C. SAP R/3
D. WebDAV

Answer: D

QUESTION NO: 28

Which of the following languages does the Interstage Apworks development environment support?

A. All of the above
B. Java
C. C++
D. C

Answer: B

QUESTION NO: 29

Which of the following is a standard protocol for accessing directories that is included with Interstage?

A. RADIUS
B. IIOP
C. ID
D. LDAP

Answer: D

QUESTION NO: 30

Which development languages is NOT available for creating applications to run on Interstage App Server V6

A. C/C++
B. .NET
C. Java
D. COBOL

Answer: B

QUESTION NO: 31

Interstage Application Server Plus Developer includes which two development functions?

A. Apworks and Application Server
B. Application Server and Eclipse
C. Integrated Java Development Environment and Application Server
D. Application Framework and Eclipse

Answer: C

QUESTION NO: 32

Which of the following protocols does CORBA provide to link client/server applications running over different platforms?

A. IDL
B. IIOP
C. SWAP

D. ebXML

Answer: B

QUESTION NO: 33

Which of the following is NOT a feature of Interstage i-Flow?

A. Full featured application development environment

B. Broad Administration and Notification Capabilities

C. Modular, Standards-based Architecture

D. Browser-based Process Modeling Environment

Answer: A

QUESTION NO: 34

Interstage Application Server Plus Developer is an integrated development environment for developing applications in what language?

A. Java

B. Python

C. C++

D. Visual Basic

Answer: A

QUESTION NO: 35

Complete the following sentance. Eclipse is ?

A. A Java based testing component that allows stand alone Application Server testing,

B. A sophisticated UML tool that supersedes the Apworks modeling components.

C. An open source development environment project.
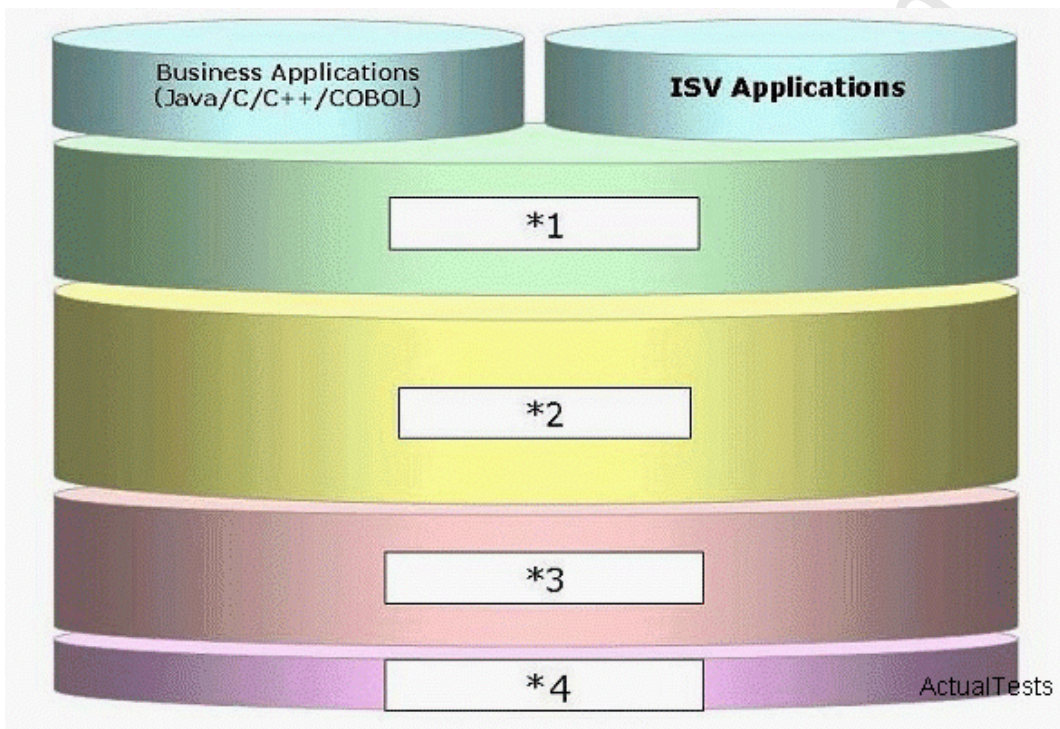

D. None of the above

Answer: C

QUESTION NO: 36

Which of the following statements is correct for Interstage Shunsaku Data Manager?

A. For high speed searching indexes should be constructed for any data supplied
B. Extensive table design is unnecessary
C. Full text search is only possible on the specified columns
D. For optimum performance, some tuning is required

Answer: B

QUESTION NO: 37

The diagram below shows the structure of the Interstage Product Categories. The numbers in the diagram correspond to the category names given in the answers. Select the answer in which the number corresponds to the correct category name.

A. 2 - Foundation
B. 1 - Development
C. 3 - Service and Support
D. 4 - Integration

Answer: B

QUESTION NO: 38

Which of the following statements accurately describes the use of Application Server Plus Developer?

A. All of the above.

B. Framework product built into the application server, to support operations and short-term application testing

C. Integrated development bundled with Application Server runtime environment focused on purely Java/J2EE application development

D. Integrated development environment supporting system development in various languages such as Java, C, C++ and CORBA.

Answer: C

QUESTION NO: 39

Which of the following languages does the Interstage Apworks development environment support?

A. C

B. All of the above

C. Java

D. C++

Answer: C

QUESTION NO: 40

The application framework functions provided with Apworks are based on _____ application design.

A. .NET

B. J2EE

C. XML

D. UML

Answer: B

QUESTION NO: 41

Interstage Application Server Plus Developer is an integrated development environment for developing applications in what language?

A. Visual Basic

B. Python

C. Java

D. C++

Answer: C

QUESTION NO: 42

Which of the following sentences best describes the function of the Resource Pooling function of the Work Unit control function

A. Provides the mechanisms necessary to operate multiple applications as single jobs
B. New business applications can be added or replaced without affecting the existing operations, and it is also possible to add servers
C. Application errors (abnormal terminations, loops, deadlocks, etc.) can be detected quickly and jobs can be recovered automatically
D. The most effective use of server resources such as CPU and memory can be made by obtaining server resources such as processes and threads in advance

Answer: D

QUESTION NO: 43

Into which of the following product category functions does Interstage Portalworks fit?

A. Process Integration
B. Content Integration
C. Execution Environment
D. Front Integration

Answer: D

QUESTION NO: 44

In what year was Interstage first released?

A. 1996
B. 2002
C. 1998
D. 2000

Answer: C

QUESTION NO: 45

The application framework function provided with Apworks reduces development time of J2EE applications and increases efficiency of which component?

A. The application server component
B. The portal component
C. The JSP tag library component
D. The web service communication component

Answer: A

QUESTION NO: 46

Which of the following functions is NOT available using the Interstage App Server V6 Work Unit Control functions

A. Business application management
B. Automatic job recovery
C. Load balancing
D. Resource pooling
E. Predictive monitoring

Answer: C

QUESTION NO: 47

Which of the following describes the Collaborative Workplace function provided by Interstage Portalworks?

A. A function that performs batch registration of users and services, and analyzes access logs.
B. Performs logon processing on behalf of users once authentication information has been entered and saved.
C. Supports the rapid resolution of business issues by promoting the sharing of information and services between members.
D. A function that personalizes the content of information received from business applications.

Answer: C

QUESTION NO: 48

Which of the following statements is NOT true about Interstage i-Flow?

A. Interstage i-Flow is primarily designed for system to system process management
B. Interstage i-Flow provides a standards based architecture
C. Interstage i-Flow is designed primarily for human to human process management
D. Interstage i-Flow supports key Business Process functions

Answer: A

QUESTION NO: 49

Which of the following languages does the Interstage Apworks development environment support?

A. All of the above
B. C++
C. Java
D. C

Answer: C

QUESTION NO: 50

Which of the following functions is NOT provided by Interstage Traffic Director?

A. VPN function
B. Server load balancing function
C. Caching function
D. Bandwidth (QoS) control function

Answer: A

QUESTION NO: 51

Which of the following describes one of the functions provided by Interstage Contentbiz

A. Portal operation management function
B. High traffic technology
C. Data mining.
D. Profile management mechanism

Answer: D

QUESTION NO: 52

All of the following sentences describe features of Interstage Traffic Director. Which of them best describes the feature that allows non-stop server operation?

A. Close affinity with Interstage Application Server functions.

B. Automatic detection and isolation of a faulty server

C. Transmission of an error page when the whole system is overloaded or unavailable

D. Load balancing across multiple web servers means that interactive transaction processing from a user is guaranteed to be allocated to the same server each time

Answer: B

QUESTION NO: 53

Which of the following Interstage products is NOT contained in the ? Integration ? product category

A. Application Server

B. Portalworks

C. Navigator

D. CollaborationRing

Answer: A

QUESTION NO: 54

Which development languages is NOT available for creating applications to run on Interstage App Server V6

A. .NET

B. C/C++

C. COBOL

D. Java

Answer: A

QUESTION NO: 55

Which of the following is a communications protocol that has encryption technologies that are used during Internet VPN communications?

A. S-MIME
B. GPKI
C. LDAP
D. IPsec

Answer: D

QUESTION NO: 56

Into which of the following product category functions does Interstage Shunsaku Data Manager fit?

A. Process Integration
B. Execution Environment
C. Front Integration
D. Content Integration

Answer: D

QUESTION NO: 57

Which of the following statements describing the features of Interstage Application Server Plus Developer is NOT correct?

A. Java programs running under control of the application server must be built using the Integrated Java Development Environment to enable them to run at their most efficient
B. The SOAP gateway generation tool and the SOAP application generation wizard support the conversion of existing EJB assets into Web services
C. EJB components can be efficiently developed by using a wizard that automatically generates prototype source code for EJB components
D. Developer supports the Java 2 Platform, Standard Edition version 1.4.1

Answer: A

QUESTION NO: 58

Which of the following sentences best describes the Hot Deployment function provided by the Work Unit control?

A. Application errors (abnormal terminations, loops, deadlocks, etc.) can be detected quickly and jobs can be recovered automatically
B. New business applications can be added or replaced without affecting the existing operations.

C. The most effective use of server resources such as CPU and memory can be made by obtaining server resources such as processes and threads in advance

D. Provides the mechanisms necessary to operate multiple applications as single jobs

Answer: B

QUESTION NO: 59

Which of the following statements is TRUE for Interstage App Server V6?

A. Many configuration items must be specified by the user during application setup

B. Operation and environment settings for applications, and Web services can be controlled through the client server Control Console application

C. Setup of business applications on the server require detailed knowledge of the system configuration settings

D. Applications across multiple servers can be controlled from the system management view

Answer: D

QUESTION NO: 60

Which of the following statements most correctly describes the use of RosettaNet and ebXML within Interstage CollaborationRing?

A. They make it possible to control and manage linkages with current business applications

B. They make it possible to integrate electronic commerce between corporations via the Internet.

C. They are key technologies that implement the SWAP protocol

D. They provide integration support for applications across the entire enterprise.

Answer: B

QUESTION NO: 61

Which of the following circumstances would NOT necessarily benefit from using Interstage XWand?

A. Conforming to Sarbanes-Oxley Act or Basel II initiative

B. Developing an online e-commerce application that required high performance and high scalability.

C. Publishing the Financial reports for a businesses.

D. Interchange of financial data between organizations.

Answer: B

QUESTION NO: 62

Which of the following is NOT a feature of Interstage Apworks?

A. Support of CWM which provides metadata interchange among business intelligence, knowledge management and portal technologies
B. None of the above, all are features of Interstage Apworks
C. Frameworks encourage the componentisation of Web applications, which provides improved flexibility, maintainability and productivity
D. Server applications can be debugged and deployed in stand-alone environments using simple operations
E. Utilisation of open-standard and state-of-the-art technologies such as servlets, JSP, EJB, and SOAP

Answer: A

QUESTION NO: 63

Which of the following functions does NOT apply to the load balance feature of Interstage App Server V6?

A. Sessions can continue across web servers even when a fault condition causes one server to stop
B. Client requests are routed to the correct Web server
C. Requests from multiple clients to be spread across multiple Web servers
D. New applications can be added as required

Answer: D

QUESTION NO: 64

When talking about Interstage Apworks, which of the following supports the conversion of existing EJB assets into Web services and their publication on the network

A. The Web services generator framework
B. The SOAP gateway generation tool and the SOAP application generation wizard
C. The SOAP gateway generation tool and the WSDL wizard
D. The Apworks SOAP publishing component

Answer: B

QUESTION NO: 65

Which of the following describes one of the functions provided by Interstage Contentbiz

A. High traffic technology

B. Portal operation management function

C. Data mining.

D. Profile management mechanism

Answer: D

QUESTION NO: 66

Which of the following interfaces is NOT provided by the Aggregation function of Interstage Contentbiz?

A. WebDAV

B. SAP R/3

C. Lotus Notes

D. RDB

Answer: A

QUESTION NO: 67

Which of the following functions relates to the ? Foundation ? product category?

A. Provides support for maintaining stable operations

B. Brings together business information and processes into a cohesive view of the business

C. Provides a robust infrastructure for supporting Web applications

D. A highly productive environment for creating Web applications

Answer: C

QUESTION NO: 68

Which of the following features is NOT considered to be a part of the integration of business processes?

A. Provides a rich array of practical components and frameworks

B. Uses business intelligence to achieve real-time utilization of information linked to mission-critical tasks

C. Uses an XML database engine to achieve effective use of widely diverse and unstructured data

D. Enables corporate business processes to be represented visually and replaced dynamically
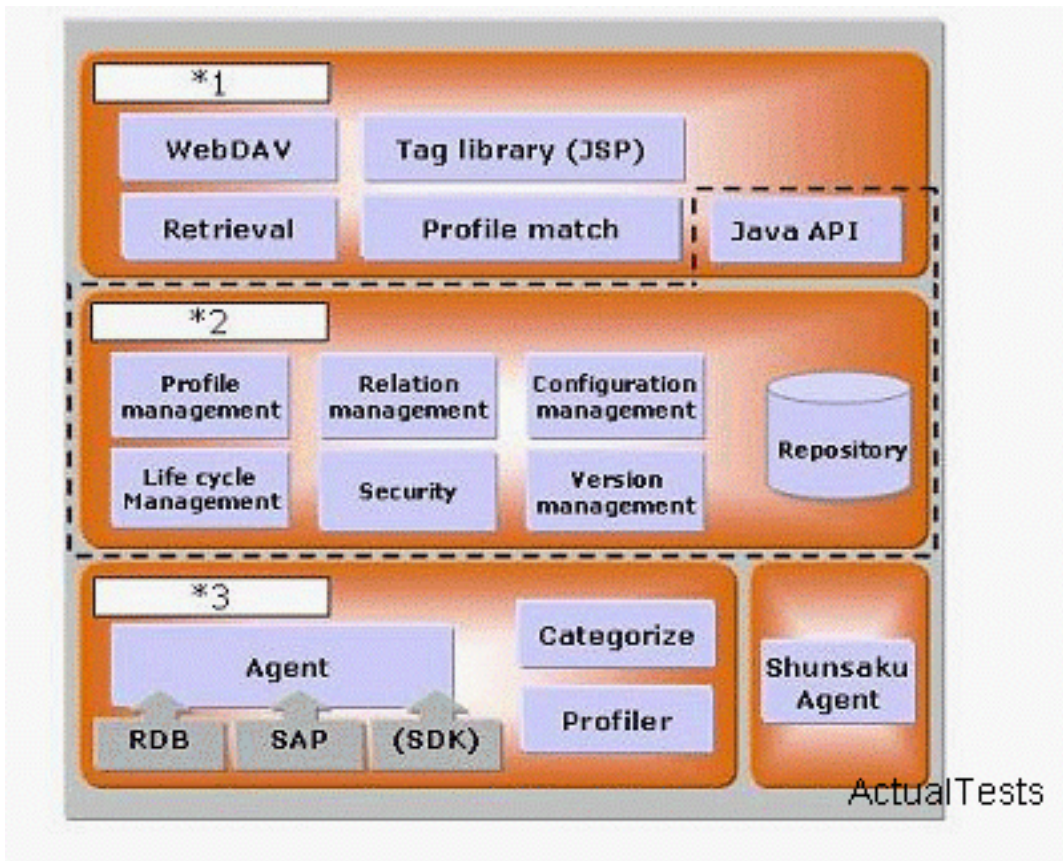

Answer: A

QUESTION NO: 69

Which of the following functions is NOT provided by Interstage Traffic Director?

A. Bandwidth (QoS) control function

B. VPN function

C. Caching function

D. Server load balancing function

Answer: B

QUESTION NO: 70

The following diagram shows the major components of Interstage Contentbiz. Select the number corresponding to a box on the diagram that external applications need to connect to in order to access the content managed by Contentbiz.

A. 3

B. 1

C. All of the above

D. 2

Answer: B

QUESTION NO: 71

Which of the following features is NOT a function of Interstage Shunsaku Data Manager?

A. High scalability

B. Advanced search function

C. High availability, reliability and safety

D. Multiple integration interfaces

Answer: D

QUESTION NO: 72

From what area was the technology used in the OLTP functions of Interstage App Server V6 derived.

A. Online server applications

B. Open source technologies

C. Load balancing servers

D. Mainframe software

Answer: D

QUESTION NO: 73

Which of the following functions relates to the ? Integration ? product category?

A. A highly productive environment for creating Web applications

B. Brings together business information and processes into a cohesive view of the business

C. Provides support for maintaining stable operations

D. Provides a robust infrastructure for supporting Web applications

Answer: B

QUESTION NO: 74

Into which of the following product category functions does Interstage Shunsaku Data Manager fit?

A. Process Integration

B. Front Integration

C. Execution Environment

D. Content Integration

Answer: D

QUESTION NO: 75

Which of the following is an XML specification that relates to electronic commerce and is included in Interstage V6.0?

A. XLink

B. SWAP

C. XBRL

D. ebXML

Answer: D

QUESTION NO: 76

Which of the following features is NOT a function of Interstage Portalworks?

A. Business Navigation
B. Content Management
C. Collaborative Workplace
D. Brick Service

Answer: B

QUESTION NO: 77

Which of the following features is NOT a function of Interstage Portalworks?

A. Content Management
B. Brick Service
C. Collaborative Workplace
D. Business Navigation

Answer: A

QUESTION NO: 78

Which of the following statements best describes how Interstage Shunsaku Data Manager handles multiple search requests?

A. Multiple search requests are sent as multiple requests and the results are returned to each application.
B. Multiple search requests are sent as multiple requests and the combined results are returned to each application.
C. Multiple search requests are combined into a single batch request and the single combined result is separated and then returned to each application
D. Multiple search requests are combined into a single batch request and the combined results are sent to each application

Answer: C

QUESTION NO: 79

Which of the following sentences best describes the function of the Resource Pooling function of the Work Unit control function

A. The most effective use of server resources such as CPU and memory can be made by obtaining server resources such as processes and threads in advance

B. New business applications can be added or replaced without affecting the existing operations, and it is also possible to add servers

C. Provides the mechanisms necessary to operate multiple applications as single jobs

D. Application errors (abnormal terminations, loops, deadlocks, etc.) can be detected quickly and jobs can be recovered automatically

Answer: A

QUESTION NO: 80

Which of the following statements is correct for Interstage Shunsaku Data Manager?

A. For optimum performance, some tuning is required

B. For high speed searching indexes should be constructed for any data supplied

C. Full text search is only possible on the specified columns

D. Extensive table design is unnecessary

Answer: D

QUESTION NO: 81

Which of the following statements most correctly describes the use of RosettaNet and ebXML within Interstage CollaborationRing?

A. They are key technologies that implement the SWAP protocol

B. They make it possible to control and manage linkages with current business applications

C. They provide integration support for applications across the entire enterprise.

D. They make it possible to integrate electronic commerce between corporations via the Internet.

Answer: D

QUESTION NO: 82

Which of the following features is NOT a function of Interstage Shunsaku Data Manager?

A. Multiple integration interfaces

B. High availability, reliability and safety

C. High scalability

D. Advanced search function

Answer: A

QUESTION NO: 83

Which of the following statements is NOT correct for the Management function of Interstage Contentbiz?

A. Interfaces seamless access to content with no ? hard ? dependency on the location or access method for the content
B. Enterprise business content can be integrated whether located internally or externally to the organization
C. The functionality provided by the repository meets the needs for building systems for System Integrators and application package developers
D. Flexible and extensible profile management is provided allowing the integration of many kinds and types of content

Answer: A

QUESTION NO: 84

Which of the following characteristics is NOT associated with the multi container function of Interstage App Server V6?

A. Each servlet container can be operated on separate Java VMs
B. A failure in one servlet container will mean the other container will need to be restarted
C. Each servlet container can be started and stopped independently
D. The same Web application can be distributed across multiple servlets

Answer: B

QUESTION NO: 85

Apdesigner is a workbench based on which open source development platform?

A. Eclipse
B. Interstage Application Server Plus Developer
C. Linux
D. Borland J Builder

Answer: A

QUESTION NO: 86

In what year was Interstage first released?

A. 1996
B. 1998
C. 2000
D. 2002

Answer: B
